

Coming to England: Apply now to Kickstart Your Automation Career

Robotic Process Automation

What is RPA?

Robotic Process Automation is the technology that today allows anyone to configure computer software, or a robot, to emulate and integrate the actions of a human interacting within digital systems to execute a business process. RPA robots utilise the user interface to capture data and manipulate applications just like humans do. They interpret, trigger responses, and communicate with other systems to perform various tasks.

»» Why choose a career in RPA?

RPA is a technology that is revolutionising the customer experience. Careers in this emerging industry are on the rise and will continue to experience growth in the coming years.

»» Flexible/Remote Working

The future of work is a human-led, tech-powered community of solvers. This Course prepares you for the new way of working and gives you the flexibility to work remotely.

Empowering people and communities

The School of Automation is on a mission to find talented people who want to build a rewarding career in process automation. We are offering hands on practical training that will enhance your existing skills to enable you to use the automation software.
